Kamila Duda

In 2019, I decided to change my sector to programming. I started learning HTML, CSS, and JavaScript. After learning Bootstrap, my first page was created. Every day I systematically expand my knowledge by reading books, blogs, and attempting online courses. I know the basics of PHP, MySQL, XML, and AJAX, I used also the WordPress platform. In my portfolio, I have websites, web applications downloading data from API, games, and a group project.
